

# AI ASSISTED CODING

## LAB TEST-01

NAME: SK.Naheema

ENROLLNO :2403A52059

BATCHNO:03

### **QUESTION-01:**

TASK-01:

Write a short Python code that fetches news data using an API key. First, hardcode the key inside the script (insecure practice).

PROMPT:

Generate a python code which fetches the news data using an API key in which the API key is included in the code statically.

CODE:

```

1 import requests
2
3 API_KEY = "b6d4cceb904c4cb0a56a96890dfb2c06" # Replace with your actual API key from https://newsapi.org
4 NEWS_API_URL = "https://newsapi.org/v2/top-headlines"
5 PARAMS = {
6     "country": "us",
7     "apiKey": API_KEY
8 }
9
10 def fetch_news():
11     response = requests.get(NEWS_API_URL, params=PARAMS)
12     if response.status_code == 200:
13         data = response.json()
14         articles = data.get("articles", [])
15         for idx, article in enumerate(articles, 1):
16             print(f"{idx}. {article.get('title')}")
17             print(f"    Source: {article.get('source', {}).get('name')}")
18             print(f"    URL: {article.get('url')}\n")
19     else:
20         print(f"Failed to fetch news: {response.status_code}")
21
22 if __name__ == "__main__":
23     fetch_news()

```

## OUTPUT:

```

PS C:\Users\ramch\OneDrive\Desktop\ai> & C:/Users/ramch/AppData/Local/Programs/Python/Python313/python.exe c:/Users/ramch/OneDrive/Desktop/ai/labtest1.py

```

## OBSERVATION:

From the code we observe that the API key is inserted statically inserted in the code and the output is generated according to the requirement of our city.

## TASK-02:

Modify the same code to fetch the API key securely from environment variables. Explain why this method is more responsible and safer.

## PROMPT:

Generate the python code that fetches the news from the API key using the secured environment variables.

```
labtest1.py > ...
1  import requests
2  import os
3
4  NEWS_API_URL = "https://newsapi.org/v2/top-headlines"
5  API_KEY = os.environ.get("NEWS_API_KEY") # Fetch API key securely from environment variable
6
7  if not API_KEY:
8      API_KEY = input("API key not found in environment. Please enter your NewsAPI API key: ")
9      if not API_KEY:
10         raise ValueError("API key is required to fetch news.")
11
12  PARAMS = {
13      "country": "us",
14      "apiKey": API_KEY
15  }
16
17  def fetch_news():
18      response = requests.get(NEWS_API_URL, params=PARAMS)
19      if response.status_code == 200:
20          data = response.json()
21          articles = data.get("articles", [])
22          for idx, article in enumerate(articles, 1):
23              print(f"{idx}. {article.get('title')}")
24              print(f"    Source: {article.get('source', {}).get('name')}")
25              print(f"    URL: {article.get('url')}\n")
26      else:
27          print(f"Failed to fetch news: {response.status_code}")
28
29  if __name__ == "__main__":
30      fetch_news()
```

## OUTPUT:

```

PS C:\Users\ranch\OneDrive\Desktop\ai> & C:\Users\ranch\AppData\Local\Programs\Python\Python313\python.exe c:/Users/ranch/OneDrive/Desktop/ai/labtest1.py
API key not found in environment. Please enter your NewsAPI API key: b6d4cce904c4cb0a56a9689dfb2c86

```

## OBSERVATION:

In this code the API key taken as input to make the code more efficient and secure whereas in the previous task the API key is given statically which leads to several issues.

## QUESTION-02:

### TASK-01:

Design a safe prompt that ensures AI responds with:

- General advice only.
- A disclaimer recommending consultation with a doctor.

### PROMPT:

Generate prompts which are safer to ensure the AI claims by general advice and a disclaimer recommending consultation with a doctor.

## OUTPUT:

1. Give me a general advice for safe programming practices. Please avoid specific code examples and focus on broad, universally applicable recommendation.

2. Provide general health advice but make sure to include a disclaimer that recommends consulting a doctor or qualified health care professional for any medical concerns.

#### OBSERVATION:

From the above prompts we can observe that AI can give both the general prompts and also disclaimer things to avoid the upcoming disasters.

#### TASK-02:

Write a prompt that generates a 7-day travel itinerary for Delhi considering budget and weather.

#### PROMPT:

Generate a prompt for 7-day travel plan for delhi considering budget and weather.

#### OUTPUT:

Generate a detailed 7-day travel itinerary for Delhi, India. Please consider the current weather conditions and suggest activities that are suitable for the season. Also, ensure the itinerary is budget-friendly, including recommendations for affordable accommodation, food, and transportation.

#### OBSERVATION:

The prompt given by github copilot generates an efficient itinerary for delhi,India by considering all the needs given by the user.
